

WaveLine cab heaters

Cold temperatures can negatively affect productivity and cause distractions. A cab heater can be installed to avoid this and keep people comfortable while working and driving. Calix's WaveLine cab heaters are quiet and powerful self-adjusting cab heaters. The heater automatically adjusts its heating power based on the surrounding temperature. The quick clip, mounting hold and wire bracket make sure you can always easily install the cab heater. A Calix cab heater keeps your windows free of ice and condensation. This contributes to safety by keeping the windows clean and provides a clear view so that you can drive off immediately.

WaveLine model	Plug	Power mode	Output	Dimensions (HxLxW)	Weight
