

POWERHEAT 

POWERHEAT

POWERHEAT is the new style (engine) pre-heater. The compact design, in combination with the chosen materials, integrated pump, adjustable thermostat and all required control and safety features, makes it an exceptional high quality heater.

The heat exchanger is based on a die-cast tubular component in aluminum with a large heating surface. The heating element is embedded in aluminum during the die-casting process so therefore completely corrosion proof and not in direct contact with the coolant or liquids.

This means a more effective heating and no negative side effects for the coolant or liquids. In addition the Aluminum AS13 is finished with a Teflon coating.
